Tus Pagos API

This service gives the ability to receive payments through a payment gateway developed with multiple payment methods. Some of them are based on payment methods used in Venezuela (as "Pago Movil C2P" and "Cuentas de Bancos Venezolanos"). It also does the exchange from USD to VES for these payment methods using a public API called "venecodollar" which just returns the current exchange rate for these currencies.

The request's body needs to be encrypted by AES 256 CBC, thanks to this we could assure the data that is being sent to the service is only called by this plugin and also adds a layer of security to the communication.

The payment methods are as follows:

- Credit Card: Any credit or debit card Mastercard or VISA
- Venezuelan Bank Accounts: Make a charge to any bank account in Venezuela
- Pago Movil C2P: This is a payment method developed only in Venezuela, but it could be compared to a service as Zelle, where it is a service that is implemented in every bank to make transfers through a middleware network.

This plugin extends the WooCommerce Class "WC_Payment_Gateway" to be able to publish these methods inside the "Payment" in Woocommerce Settings.

Note: This plugin does not work in block themes
